RE: Bevill Amendment waste
related to Ohio's CAP

Neil Stoloff
PRC Environmental Management, Inc.
1505 Planning Research Drive
McLean, Virginia 22102

Dear Mr. Stoloff:

Per your request, Ohio EPA is submitting the following information concerning the generation and possible cleanup activity for Bevill Amendment related wastes in the State of Ohio. The enclosed information was obtained from Ohio EPA Southeast District Office personnel and Part A, hazardous waste facility permit applications. All Ohio EPA districts were contacted in an effort to identify facilities which generate these types of wastes. However, all of the facilities identified were located in the Southeast District.

Ohio currently has four facilities which either generate Bevill Amendment related wastes or will possibly need cleanup of these types of wastes at a later date. Of these four facilities, only one is known to be currently generating these wastes. Annual generation estimates are provided for this facility (Ormet). Another of these facilities (Satralloy) is reprocessing waste accumulated on-site. However, the waste being reprocessed is derived from the waste on-site and is represented in the enclosed information. All other quantities represent estimates of the amount of non-recurrent waste which will probably need cleanup in the future.

The attached material details the facilities of concern and associated amounts of Bevill Amendment related wastes. The attached material is the most complete information that Ohio EPA can submit at this time. Information required for

Mr. Neil Stoloff

projections of on-going generation is currently unavailable. Ohio EPA is currently assessing the amount of Bevill Amendment related waste at these facilities and will notify PRC if more accurate information becomes available.

Should you have any questions, please contact me at the Division of Solid and Hazardous Waste Management at 614/644-2956.

Sincerely,

Michael W. Kelley
